Online Supplement 1. Preparation of the sample mix	2
Online Supplement 2. Recovery rate cryo-milling	5
Online Supplement 3. Particle count.....	6
Online Supplement 4. Characteristics of collected individual items of marine debris.....	10
Online Supplement 5: Polymer type distribution.....	19

Online Supplement 1. Preparation of the sample mix

Online Supplement Figure 1.1. Exemplary pictures of debris items collected on the beach before milling. From the top left to right: **A. Foam** (Expanded styrene foam and polyurethane foam from filling material); **B. Drink bottles (transparent, green and blue ones, different sizes); C. Other bottles** (for cleaning, washing detergents etc.); **D. Fish boxes** (differently coloured fish transport crates); **E. Jerry cans** (different types and sizes for transport of fluids); **F. Sheets** (plastic bags, foil balloons and agricultural foils); **G. Strap bands and 6-pack rings** (for packaging of larger items and beverage can rings); **H. Working gloves** (rubbery, sturdy gloves mainly used in fisheries); **I. Balloons** (latex, polymer ribbons and valves); **J. Other fishing gear** (polymer hooks, oyster nets, net floaters, etc.); **K. Silicone tubes** (silicone putty or grease tubes); **L. Food packaging** (yoghurt beakers, food containers, candy wrappers, etc.); **M. Miscellaneous** (items that not belong to other categories, e.g. baskets, buoys, beach toys, caps, etc.) and **N. Ropes and nets** (fishing nets, dolly ropes, ropes from a broad maritime sector).

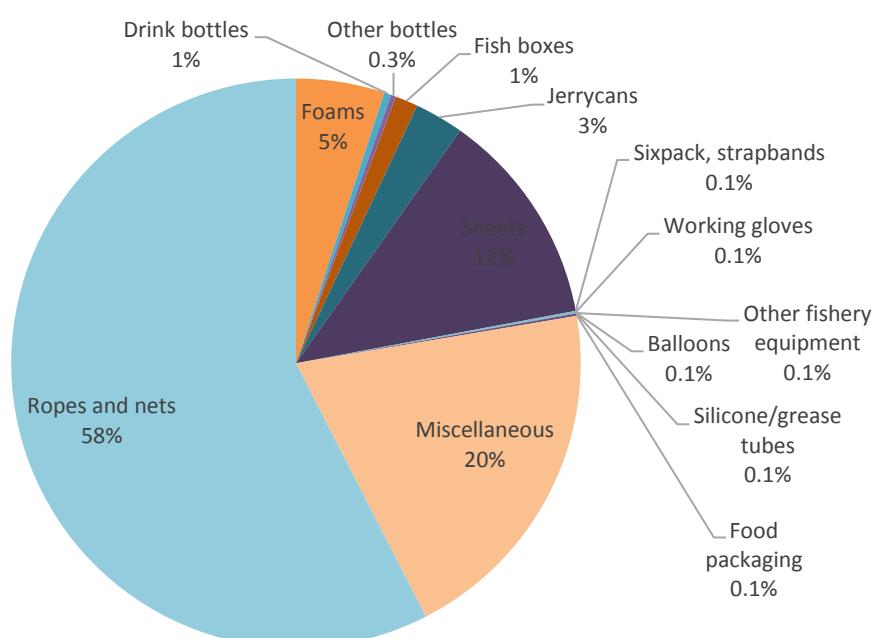

Online Supplement Figure 1.2. Picture of one kilogram of the marine debris sample, sorted by category (from top left) before milling: Nets and ropes, Sheets, Foam, Miscellaneous, Fish boxes, drink bottles, jerry cans, Food packaging, Strap bands and 6-pack rings, fishery gloves, Silicone tubes, Other bottles, Other fishing gear, Balloons. Below: Percentage of different plastic categories (in means of mass) contributing to one kg of the sample mix

Online Supplement Figure 1.3. Contribution of each category to the microplastic mixture based on data of an earlier beach clean-up on Texel, the Netherlands in 2005.

Online Supplement 2. Recovery rate cryo-milling

By using a high speed laboratory rotor mill the temperature can rise to about 50 °C. The sample mix was therefore milled in nitrogen at -196 °C. At this temperature plastic is brittle. For easier milling items were sorted according to their shape (threads, sheets, foam and rigid plastics).

Online Supplement Table 2.1. The rate of return of the cryo-milling process is shown. The loss of some material can be related to the loss of sand and statically charging of foam and foils.

Shape	Composition of the total sample (%)	Rate of return (%)
Threads	59	85
Sheets	12	77
Foam	5	79
Rigid	24	90

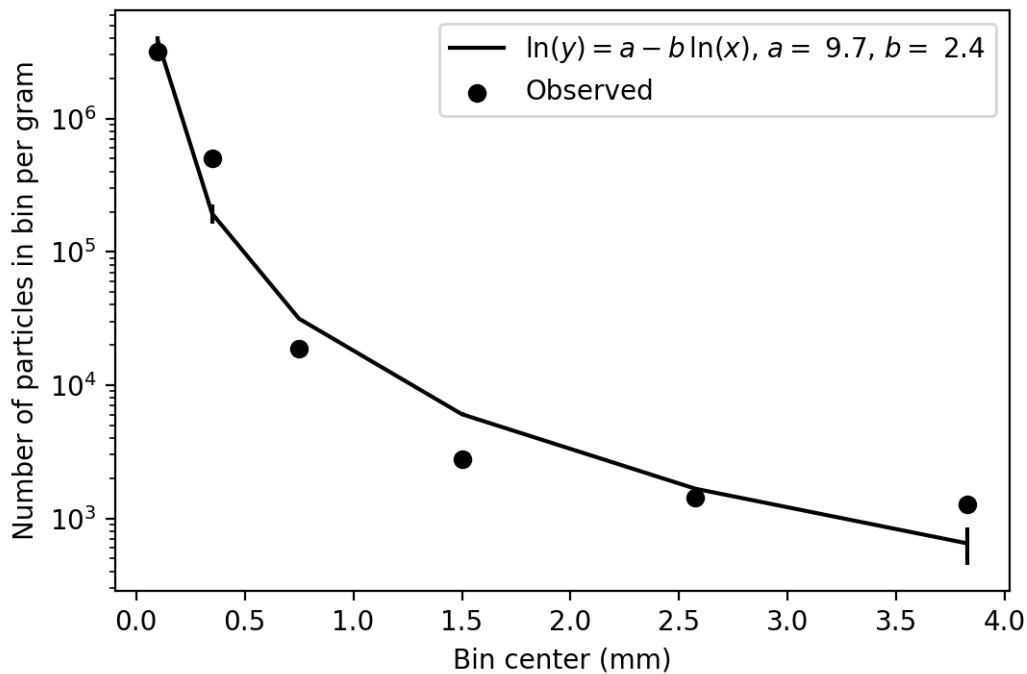

Online Supplement 3. Particle count

To estimate the number of particles per gram particles were counted by size category.

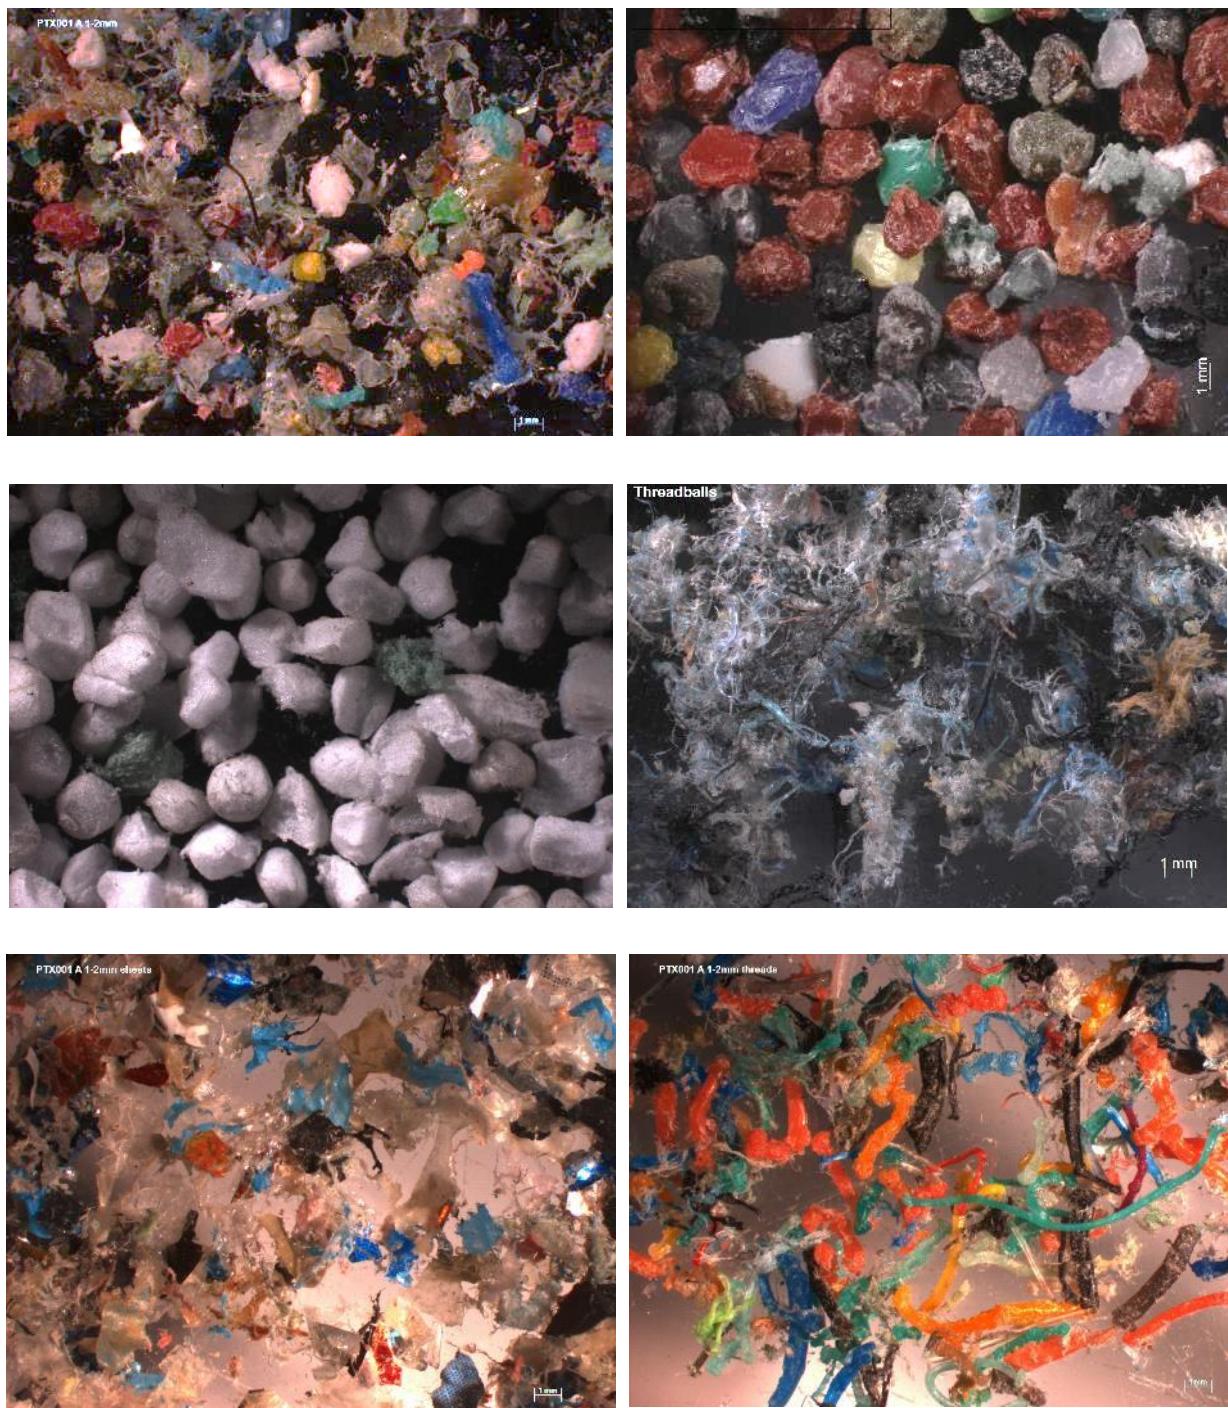

Online Supplement Table 3.1. Particles of different sizes were obtained, sieved into different size categories and then counted (n) and weighed (in gram) by category. For the bigger sizes, >4.5 – 1.0 mm, particles were categorized into sheets, threads, foam, fragments and thread balls. For the smaller sieve sizes (1.0 - <0.2 mm) this was not possible. Samples smaller than 0.5 mm were poured with ethanol in a Bogorov counting chamber and counted manually on pictures taken under the microscope (AxioCam MRc with AxioVision 40 V 4.8.2.0 software (Zeiss, Germany)) marking counted particles to avoid double counts (OS Figure 3.3.). To verify results, two different sample batches were counted (E-A and E-B). In some cases two or three subsamples were counted to make sure the numbers of particles are comparable. The last column is the sum of the individual counts per category.

Online Supplement Figure 3.1. Particle size fraction and particle number data fitted to the logarithm of the exponential function $y = a * x^{-b}$. Error bars indicate one standard deviation.

Online Supplement Figure 3.2. Photographs of the particle count of size categories 1-3 mm (sorted with sieve tower). Top left: unsorted mix 1-2 mm. Top Right: Fragments 2-3.15 mm. Centre left: Foam 2-3.15 mm. Centre right: Thread ball 2-3.15 mm. Bottom left: Sheets 1-2 mm. Bottom right: threads 1-2 mm.

Online Supplement Figure 3.3. Photographs of particles in a Bogorov counting chamber, 0.5-0.2 mm (Top) and <0.2 mm (Bottom), before (left) and after (right) counting. The chamber on the top contains 195 particles, the one on the bottom 821 particles.

Online Supplement 4. Characteristics of collected individual items of marine debris

Online Supplement Table 4.1. Characteristics of collected individual items (n=351) of marine debris, including type of debris (category and sub-category), colour and polymer type used to prepare the MLD microplastic mixture.

Online Supplement 1: Polymer type distribution

Online Supplement Table 5.1. Polymer type distribution of the beached plastic sample in terms of number and mass.

Material	Number	Mass (gram)	% Mass
Polyethylene (PE)	183	609.6	60.9
Polypropylene (PP)	112	277.6	27.7
Polyamide (PA)	1	31.4	3.1
Unidentified	16	30.7	3.1
Polyurethane (PU)	11	18.7	1.9
Polystyrene (PS)	10	17.0	1.7
Polyvinyl chloride (PVC)	5	9.4	0.9
Polyethylene terephthalate (PET)	10	4.64	0.5
Ethylene-vinyl acetate (EVA)	1	1.7	0.2
Polyacetylene	2	0.6	0.1
Total	351	1001.34	100
